Work Experience

Screen Hiring

New York, NY

Software Engineer

June 2026 – Present

- Constructed an outbound lead generation pipeline in Python with Playwright that scraped VC and accelerator portfolio pages into normalized company records, enriched with decision-maker contacts via LinkedIn resolution through the Brave Search API, and qualified leads by checking Greenhouse, Lever, and Ashby for active job postings, sourcing 3,000 qualified leads and cutting LLM and paid search spend ~40% by skipping non-hiring companies
- Integrated candidate-importing with the Greenhouse, Lever, and Ashby ATS APIs, normalizing three distinct candidate schemas into a unified pipeline so employers could pull existing applicants directly into assessments, importing ~800 candidates across 50 employer accounts
- Instrumented client-side telemetry with PostHog, capturing 20,000 events per week, and shipped an internal analytics dashboard in Next.js on top of a PostgreSQL pipeline that powered conversion funnels, week-over-week growth, MRR, and trial-to-paid conversion

Luna Securities, Inc.

Manila, Philippines (Remote)

Software Engineer Intern

September 2025 – January 2026

- Collaborated with a team of engineers in building Flask API endpoints that consume an internal real-time price service, fed by an exchange feed of nearly 1M order-book events per trading day, and serve price and valuation data for all public companies
- Created webpages displaying interactive financial dashboards using Chart.js, jQuery, and Ajax, enabling 1,000+ users to explore market trends and gain actionable insights across selected stocks
- Maintained a Python and PostgreSQL ingestion pipeline that scrapes exchange disclosures and dividend announcements every 5 minutes on weekdays, deduplicates new filings, and syncs across databases, alongside ETL for manually uploaded quote and financial-statement files

Education

New Jersey Institute of Technology, Ying Wu College of Computing

Newark, NJ

Master of Science in Artificial Intelligence

May 2026 – May 2027 (Expected)

Oregon State University, College of Engineering

Corvallis, OR

Bachelor of Science in Computer Science (Post-Bacc)

January 2023 – March 2025

Projects

Alcohol Journaling App

May 2026 – Present

- Deployed a web application that utilized Next.js and FastAPI for 20 monthly users to log, rate, and share beverage opinions with friends and other users
- Architected a FastAPI backend integrating GPT-4o for personalized beer recommendations, grounding answers in a 335-beer catalog with cached AI descriptions to cut output tokens 37% and per-search cost 19%
- Developed a two-layer content moderation system combining an offline ML profanity checker (alt-profanity-check) and OpenAI's Moderation API for text and image screening, ensuring a safe and user-friendly experience

Hand History Analyzer

April 2025 – Present

- Engineered a Python pipeline that ingests and parses 10,000+ monthly multi-format hand histories across four online gaming platforms into a normalized schema, deduplicating via hand-ID tracking
- Implemented an event-driven data pipeline using RabbitMQ and Watchdog filesystem events, where hand-history files are detected, debounced, and queued for consumption, triggering processing within 2 seconds without polling
- Applied K-means clustering to classify 1,200+ tracked opponents into 4 behavioral groups based on VPIP/PFR/3-bet% patterns, mapping cluster centroids to standard player archetypes via threshold-based labeling

Distributed Flight Delay Analysis

July 2026 – August 2026

- Provisioned a 4-node Hadoop cluster on AWS EC2 and ran a Java MapReduce job via YARN to compute average arrival delay by airline carrier across ~17M flight records
- Built a custom Writable and Combiner to aggregate per-carrier delay averages at scale, reducing shuffle volume from ~17M to ~400 total records

Skills

Languages: Python, Java, SQL, JavaScript, HTML, CSS, C

Frameworks/Libraries: React, Next.js, Node.js, jQuery, Chart.js, Flask, FastAPI, SQLAlchemy, Alembic, NumPy, Pandas, scikit-learn, Streamlit, Plotly, Playwright, Watchdog, APScheduler

Databases: PostgreSQL, MySQL, SQLite, MongoDB

Tools/Platforms: RabbitMQ, Redis, Docker, AWS EC2, Hadoop, YARN, PostHog, Git, Jira
